

Welcome to the Digital Accessories newsletter! We appreciate and encourage feedback from dealers, whether it's with an issue discovered in our software or suggestions for new features to implement. Any questions about the information in this newsletter can be directed to Steven Higgins (steven@dac-voice-solutions.com). If this email won't display properly, you may also view it at www.dac-voice-solutions.com/newsletters/Q1_2008.pdf

Updates

Here at DAC, we have been busy improving our products and designing new ones! Two very special announcements are the new DAC website, and VS Recorder software.

Website

The DAC website is now new and improved. Besides a more streamlined layout, many features have been added. New sections include: [News](#), [About](#), [Versions List](#), [Product Manuals](#), [Dealer Package](#), [D-Phone Lineup](#), [iChannel Suite](#), and more. In addition, more thorough information is available for past products, with tips on which solution would work best for your clients. Further improvements are still yet to come, such as a thorough Tips & Troubleshooting section.

VS Recorder

Experience the convenience of call-in dictation without the cost of a server!

The VS Recorder is the solution for those who desire to dictate from their cellphone, home, or simply from a digital station, but do not wish to buy a [Voice Solutions server](#). How does it work? Up to four lines run to an external telephony card. These can be telephone or DID lines, as well as direct-wired [digital stations](#). The telephony card connects via USB to the user's PC and, using the VS Recorder software interface, saves dictation to the hard drive. The dictation can then either remain on the local PC or be sent across the network for transcription. [iChannel Lite](#) is the perfect transcription solution. However, the dictation can be sent as standard wave (.wav) files to ensure compatibility with several other third-party

transcription applications.

The very simple and user-friendly interface provides access to dozens of features. Some of these are: create and modify Author profiles; monitor user activity on all telephony ports; view all current dictation available; and use up to 9 different keymaps. These are just a few of the VS Recorder's great features. To learn more about all the exciting features, as well as see additional pictures, [click here](#). The VS Recorder will be available to dealers soon.
